Maintainer: Thomas Dickey

Stable release: 2.8.5 (February 4, 2004) [\[\[+/-\]\]](#)

Preview release: 2.8.6 (?) [\[\[+/-\]\]](#)

OS: Cross-platform

Use: web browser

License: GPL

Website: lynx.isc.org

Lynx is a text-only **Web browser** and **Internet Gopher** client for use on cursor-addressable, character cell **terminals**.

Browsing in Lynx consists of highlighting the chosen link using cursor keys, or having all links on a page numbered and entering the chosen link's number. Current versions support **SSL** and many **HTML** features. Tables are linearized (scrunched together one cell after another without tabular structure), while frames are identified by name and can be explored as if they were separate pages.

Lynx is a product of the Distributed Computing Group within Academic Computing Services of the **University of Kansas**, and was initially developed in 1992 by a team of students at the university (**Lou Montulli**, Michael Grobe and Charles Rezac) as a hypertext browser used solely to distribute campus information as part of a **Campus-Wide Information Server**. In 1993 Montulli added an Internet interface and released a new version (2.0) of the browser [\[1\]](#) [\[2\]](#) [\[3\]](#).

The background of the slide is a dark blue field filled with a dense, interconnected network of nodes and lines. The nodes are represented by small circles, some of which are white with blue outlines, while others are solid blue. These nodes are connected by a web of thin, white lines, creating a complex, mesh-like structure that suggests a global or large-scale network. The overall aesthetic is technological and digital.

Cos'è Internet of Things?

IoT
=
Things + Internet

Sono “cose” e non computer e devono usare Internet per comunicare

Il costo delle “radio” è in continua discesa. Oggi costano meno di 1\$

Sembra che ogni oggetto debba
essere connesso

Oggi le aziende lo fanno per avere «features»

Oggetti connessi producono dati che sono nelle mani
delle aziende

Ne sono consapevoli?

Peak Power

On a 104° day in Austin, remote control of home thermostats helped cut power demand.

Megawatts

Hype Cycle for Emerging Technologies, 2020

Plateau will be reached:

○ less than 2 years

● 2 to 5 years

● 5 to 10 years

▲ more than 10 years

⊗ obsolete before plateau

As of July 2020
